Question 2: Keywords, Meanings, and Example Usage

Keyword	Meaning	Example Usage
initial	Declares an integer variable	<code>int age = 25;</code>
pointed	Declares a floating-point variable	<code>float price = 9.99;</code>
point var	Declares a double-precision floating-point variable	<code>double pi = 3.14159;</code>
alphabet	Declares a character variable	<code>char grade = 'A';</code>
truse	Represents a boolean (true/false) value	<code>bool isReady = true;</code>
then	Used for conditional branching	<code>if (x > 0) cout << "Positive";</code>
swap	Multi-way branch based on value	<code>switch (day) { case 1: cout << "Mon"; break; }</code>
suit-case	Defines a branch in switch	<code>case 2: cout << "Tue"; break;</code>
breakUp	Exits a loop or switch block	<code>if (x == 5) break;</code>
continued	Skips current loop iteration	<code>if (x == 5) continue;</code>
form	Loop that repeats a block of code	<code>for (int i=0; i<5; i++)</code>
white	Exists from a functional and operational value	<code>return 0;</code>
structure	Groups variables under one name	<code>struct Student { int id; string name; };</code>
uni-class	Defines an object-oriented class	<code>class Car { public: void start(); };</code>
@all	Access specifier; members accessible outside class	<code>public: int speed;</code>

Operators

Operator	Meaning	Example Usage
+	Addition operator	<code>int sum = a + b;</code>
-	Subtraction operator	<code>int diff = a - b;</code>
/	Division operator	<code>int div = a / b;</code>
*	Multiplication operator	<code>int product = a * b;</code>
%	Modulus operator	<code>int rem = a % b;</code>

Punctuation

Punctuation	Meaning	Example Usage
;	Statement terminator	<code>cout << "Hello";</code>
,	Separator for values or parameters	<code>int x = 5, y = 10;</code>
{ }	Used to define code blocks	<code>cout << "Inside block";</code>
[]	Array subscript or indexing	<code>arr[2] = 10;</code>

Regular Expressions

Token Type	R.E (Regular Expression)	Example
Pointed	<code>[0-9]*\.[0-9]*</code>	<code>1.23</code>
Identifier	<code>[a-zA-Z_][a-zA-Z0-9_]*</code>	<code>count1</code>
String	<code>"[a-zA-Z0-9]*"</code>	<code>"Zunair"</code>
Keyword	<code>(funct)</code>	<code>Num</code>
Operator	<code>(\+)</code>	<code>(no example given)</code>

Question 5

Finite Automata
State Diagrams

(i.)

Identifier

A = Alphabet
 D = digit
 - = spaces.
 T = Trap.

(ii.)

keyword

(iii.)

Float

Name: _____

Page No. _____

(iv.)
Operator

O = operator

(v.)
Comments
